

Robert. S. Katz

Homeland Security Consultant by day and Firefighter Paramedic by night; Robert Katz has been enjoying countless rewarding assignments during his exciting career in both. Early projects at MIT, NIST, the Naval Research Laboratory, and NASA focused on satellites for surveillance of the Earth and sky. Support for DoD, State, and the UN at COMSAT re-focused that expertise on surveillance of domestic and overseas theatres instead. After 9-11, he was finally able to combine both his operational First Responder and classical Systems Engineering disciplines to assist Lockheed Martin with TSA and DHS projects to secure airports, subways, railroads, and ports. He currently supports FEMA's NIMS integration and NRF Update initiatives that is when not teaching at Emergency Management and Pre-Hospital Medicine at GWU and UMD or responding with the National Medical Response Team to CBRNE attacks.
